

## Infusion center

### Outpatient IV therapy

If you require a medication or solution that is administered through an IV, you can receive your treatment in a comfortable, convenient setting where no hospital admission is required. Our center offers comfortable outpatient infusion treatment services for adults, allowing you to live at home, attend school or remain on the job without serious disruption to your routine.

#### **Why choose infusion therapy from our hospital?**

Accommodating your needs is what our outpatient infusion center is all about. From communicating with your physician to convenient parking, we are committed to

providing great care. We use the latest treatment techniques to make sure you get the high-caliber care you need. Our staff of infusion nurses and pharmacists delivers quality, cost-effective intravenous therapy. Over the course of your treatments, our professional staff teams with your physician to provide constant care. And, with our personalized approach to infusion therapy, patients seldom wait extended times to receive their medication.

*Joint ownership with physicians*

5601 Warren Parkway | Frisco, TX 75034

#### **Physician referral required.**

Physicians can schedule through Casetabs or call the scheduling office at 214.407.5166 / fax 214.407.5165.

## What treatments do we offer?

We offer quality treatment options conveniently located near you. The physicians on the medical staff here offer the following services, including:

**Iron infusions** can reduce symptoms like fatigue and shortness of breath and increase energy levels for patients with a deficiency.

**Hyperemesis hydration infusion therapy** can quickly and effectively rehydrate and restore electrolyte imbalances caused by vomiting and diarrhea. The therapy can also provide the body with essential nutrients like vitamins and minerals and can alleviate symptoms like nausea, dizziness and fatigue.

**Hydration infusions** can quickly restore hydration compared to oral hydration methods in a shorter time. Fluids contain electrolytes like sodium, potassium and chloride, which help restore electrolyte balance and are essential to muscle and nerve function and fluid balance. Infusion therapy can be especially beneficial for post-operative patients with difficulty absorbing nutrients.

**Remicade infusion therapy** is a treatment option for many autoimmune diseases, including rheumatoid arthritis, Crohn's disease, ulcerative colitis, psoriasis and psoriatic arthritis. Remicade therapy reduces inflammation and alleviates autoimmune disease symptoms like joint pain, swelling, stiffness, abdominal pain, cramping and skin rashes.

**Entyvio Infusion therapy** is a treatment option for individuals with inflammatory bowel disease (IBD), including ulcerative colitis and Crohn's disease. Entyvio reduces inflammation in the gut associated with IBD and alleviates symptoms like abdominal pain, diarrhea and rectal bleeding.
